Men and women who had created landmarks of movie history fled their homeland in the ensuing months and years. There are more species of fish in the Amazon than in the entire Atlantic Ocean. Once a year, the river rises as high as 40 feet, forcing an intersection of wildlife - including piranhas, spiders the size of birds, pink dolphins, river otters, flocks of parrots and monkeys.

Rainforests, where trees are being cut down at a staggering rate, are disappearing. Human enterprise and development not only compromise the health and ecology of these waters, but inflict global consequences.

Unsupported by naval might or government funding, a 29-year-old Norwegian, Roald Amundsen, set out with improbably slim resources: six men and a tiny, shallow vessel, the *Gjoa*, which he presumed could slip through channels that endangered larger ships. Caught by the winter ice, Amundsen did what the earlier Franklin crew had been unable or unwilling to do: he turned to the native Inuit to learn their ancient skills of Arctic survival. What they taught him - seal hunting, building igloos and handling dog teams - not only ensured the success of his voyage but were crucial training for his conquest of the South Pole in 1912.
